

Basic Elements

Simplifying Fire

CASE STUDY
PROJECT - RETAIL INFRA PROJECTS
JADCHERLA

About Client

Retail Infra Projects are in the business of building malls and apartments.

Challenges

A Pharma manufacturing company uses various chemicals for the manufacturing process on a daily basis. Some of these chemicals are highly inflammable and highly reactive. Using ordinary means could escalate the situation.

Key Initiative

With expertise in both pharma industry and fire prevention methods, we have proposed to use a medium velocity water spray system for SRS Tank Farm and Explosive Tank Farm which provides effective fire control, extinguishment, prevention and exposure protection.

Business Impact

This had proven to be a cost effective solution that protects the premises without compromising on the statutory requirements.
